-I- FUNCTION: INHIBINS AND ACTIVINS INHIBIT AND ACTIVATE, J. BIO1. Chem. 267:16385-16389(1992).

-I- FUNCTIVELY, THE SECRETION FOLLITROPIN BY THE PITUITARY GLAND. INHIBINS/ACTIVINS ARE INVOLVED IN REGULATING A NUMBER OF DIVERSE FUNCTIONS SUCH AS HYPOTHALAMIC AND PITUITARY HORMONE SECRETION, GONADAL HORMONE SECRETION, GERM CELL DEVELOPMENT AND MATURATION, ERYTHROID DIFFERENTIATION, INSULIN SECRETION, NERVE CELL SURVIVAL, EMBRYONIC AXIAL DEVELOPMENT OR BONE GROWTH, DEPENDING ON THEIR SUBBUNIT COMPOSITION. INHIBINS APPEAR TO OPPOSE THE FUNCTIONS OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mason A.J., Hayflick J.S., Ling N., Esch F., Ueno N., Ying S.-Y., Guillemin R., Niall H., Seeburg P.H.; "Complementary DNA sequences of ovarian follicular fluid inhibin show

FUNCTION: INHIBINS AND ACTIVINS INHIBIT AND ACTIVATE,

RESPECTIVELY, THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND.

INHIBINS/ACTIVINS ARE INVOLVED IN REGULATING A NUMBER OF DIVERSE
FUNCTIONS SUCH AS HYPOTHALAMIC AND PITUITARY HORMONE SECRETION,

GONADAL HORMONE SECRETION, GERM CELL DEVELOPMENT AND MATURATION,

ERYTHROID DIFFERENTIATION, INSULIN SECRETION, MERVE CELL SURVIVAL,

EMBRYONIC AXIAL DEVELOPMENT OR BONE GROWTH, DEPENDING ON THEIR

THISTORY OF THE PROPERTY OF THE PROPERTY OF THEIR

THEIR THE PROPERTY OF THE PROPER

INHIBIN A IS A DIMER OF ALPHA AND BETA-A.
INHIBIN B IS A DIMER OF BETA-A.
ACTIVIN A IS A HOMODIMER OF BETA-B.
ACTIVIN B IS A HOMODIMER OF BETA-B.
ACTIVIN AB IS A DIMER OF BETA-A AND BETA-B.
SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        VEIL MED. Sci. 57:469-473(1995).

FUNCTION: INHIBINS AND ACTIVINS INHIBIT AND ACTIVATE,

RESPECTIVELY, THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND.

INHIBINS/ACTIVINS ARE INVOLVED IN REGULATING A NUMBER OF DIVERSE

FUNCTIONS SUCH AS HYPOTHALAMIC AND PITUITARY HORMONE SECRETION,

GONADAL HORMONE SECRETION, GERM CELL DEVELOPMENT AND MATURATION,

ERVITHROID DIFFERENTIATION, INSULIN SECRETION, DEPENDING ON THEIR

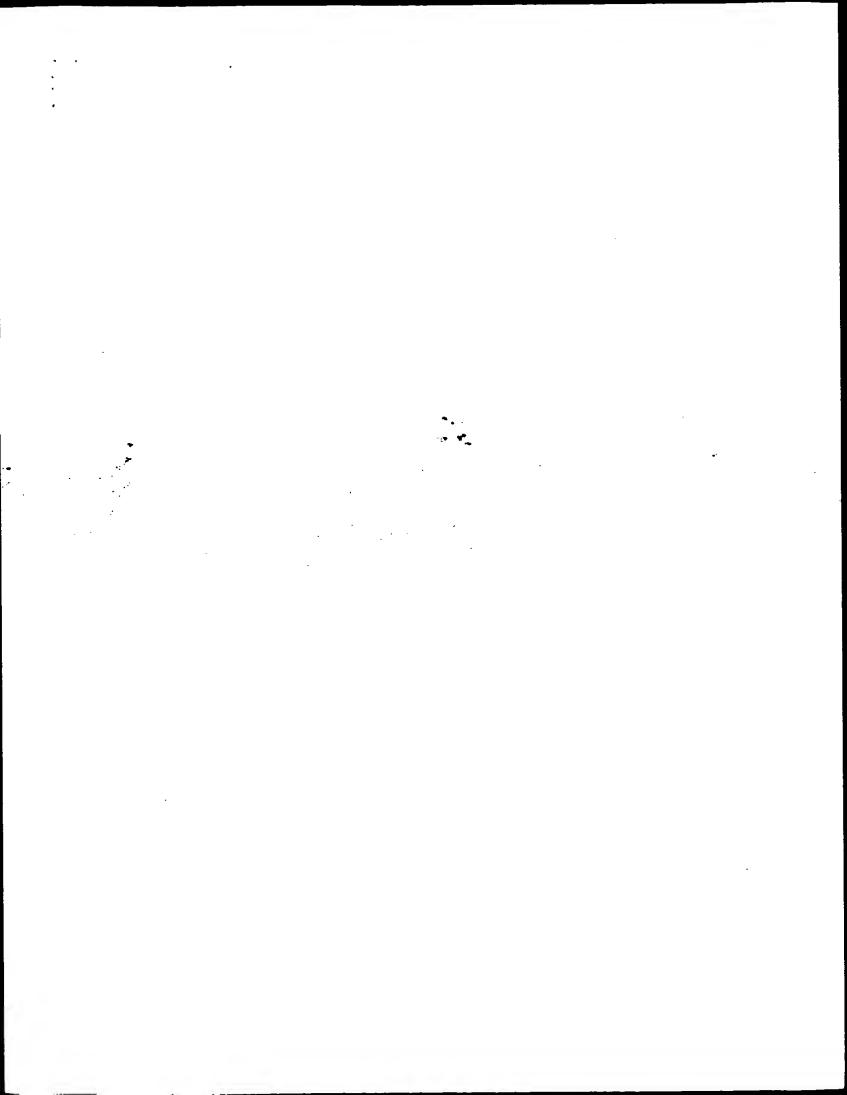

EMBRYONIC AXIAL DEVELOPMENT OR BONE GROWTH, DEPENDING ON THEIR

SUBUNIT COMPOSITION. INHIBINS APPEAR TO OPPOSE THE FUNCTIONS OF
     QRPILSRPVSRGALKTALQRLR------
